

Abstract

1 A telecommunications terminal is disclosed that comprises: a receiver for receiving a
2 geographically-sensitive message and an indicium of a geographic location of relevance; means for
3 ascertaining a geographic location of the telecommunications terminal; and a processor for
4 determining a geographic region of interest based on the geographic location of the
5 telecommunications terminal, for determining whether the geographic location of relevance is within
6 the geographic region of interest, and for disregarding the geographically-sensitive message when the
7 geographic location of relevance is not within the geographic region of interest.
